Porcine Haptoglobin

Catalog No.	8130
Analysis	SDS PAGE: ~40 & ~10 kDa bands indicative of β - and α - chains of haptoglobin.
Purity	$\geq 90\%$
Concentration	0.2 - 1 mg/ml
Buffer	10 mM sodium phosphate (pH 7.2), 150 mM NaCl, 0.05% sodium azide
Storage	-20 to -70°C. Avoid repeated freeze-thaws
Source	Fresh frozen swine serum

Haptoglobin is a serum protein that consists of two alpha and two beta chains connected by disulfide bridges. The alpha and beta chains are characterized by molecular weights of ~10 kDa and ~40 kDa respectively. It acts as a hemoglobin scavenger and has been associated with protease inhibitory activity. It is a positive acute phase reactant, the levels of which increase significantly in pigs in response to inflammation, tissue injury or disease. Haptoglobin is purified using a combination of affinity, gel filtration and ion-exchange chromatography steps.
