Canine Cardiac Myoglobin

Catalog No.	7320
Analysis	SDS PAGE: Single 17 kDa band
Purity	≥98%
Concentration	0.25 – 2.5 mg/ml
Buffer	50% Glycerol, 75 mM NaCl, 5 mM sodium phosphate, 0.05% NaN ₃ (pH 7.2)
Storage	-20°C (do not store at lower temperatures)
Source	Canine cardiac tissue

Myoglobin is a single-chain heme containing protein with a molecular weight of ~17kDa. It is the primary oxygen-carrying protein of muscle tissues. The same isoform is expressed in both cardiac and skeletal muscle. It is a sensitive biomarker for muscle injury and has been widely used as a marker of heart disease. Myoglobin is purified using a combination of gel-filtration and ion-exchange chromatography steps.
